The ideal profile system

MayTec offers a comprehensive, harmonised profile system. All profiles can be combined in any way conceivable.

The accessories provide functional and aesthetic solutions for a wide range of applications.

Applications

- machine bases
- machine enclosures
- machine guarding
- work stations

Service

The MayTec service is as versatile as the MayTec profile system.

You may choose:

- delivery of standard elements ex-factory
- delivery of profiles and accessories cut to size according to parts list for customer's assembly
- delivery of pre-fitted modular components
- delivery of completely assembled units
- assembly at your premises

- assembly and inspection stations
- transfer and supply trolleys
- partitions and protective walls
- protective and work cabins

Implementation

The MayTec profile system is easy to process and quick to assemble. Its flexible and modular construction means it can be easily modified and is reusable at any time.

An experienced team will support you in implementing the MayTec system, tailored to your individual applications, taking into consideration your dimensions, loading capacity and stability.

General

Profile group

16 mm, 20 mm, 30 mm, 40 mm, 45 mm, 50 mm, 60 mm

The profiles of the MayTec Profile System are divided into seven **profile groups (PG)**. They can be determined by the basic measure of each profile.

Slot

H-slot, F-slot, E-slot

In order to connect the profiles or to mount accessories the profiles have slots. The MayTec Slot System (→ 1.02) distinguishes between the three slot types H-slot, F-slot and E-slot, whereas E-slot exists as **E3-slot** and **E4-slot** (3 or 4 mm wall thickness).

Symbols

Many articles (fastening elements, accessories and tools) can only be used especially for individual profile groups or slot types. In this case these articles are marked with the corresponding symbols.

Profile group

dark symbol: suitable for the corresponding profile group

light symbol: not suitable

Slot type

dark symbol: suitable for the corresponding slot type

light symbol: not suitable

Remark

The symbol for the E-slot is used, if the article is (un)suitable for the two slot types E3 and E4.

Cut

These articles are offered with cut.

Stainless steel

These articles are made of stainless steel.

Cleanroom

These articles are suitable for the use in and around cleanrooms.

Attention!

Comments

- Profile machinings are defined by the article-number of the profile.
- For more complex machinings, additional order descriptions are needed.
- Non-standard machinings will be completed as per drawings

V = connector bore, G = thread, Q = cross bore

Extruded profile
as per DIN EN 12020
 (fine)
 (Replacement for DIN 17615)

Aluminium alloy Al Mg Si 0.5 F25
 Material Nr. 3.3206.72 (low temp. annealed)

Functional length: 6,000 mm
Delivery length: 6,060 mm + 10 mm

Mechanical data

(Values given in the direction of the press flow)
 Tensile strength Rm: min. 250 N/mm²
 Elongation 0.2: min. 200 N/mm²
 Pressure tension $\sigma_{zul.}$: 95 N/mm²
 Stress point A₅: min. 10 %
 Stress point A₁₀: min. 8 %
 E-Module: approx. 70,000 N/mm²
 Brinell hardness: approx. 75 HB 2.5/187.5
 Co-efficient of elongation: 23.8 x 10⁻⁶/K

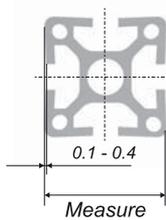

Surface as per DIN 17611:
 E6/EV1 - dull finish and anodised colours
 Coat thickness approx. 10 μ m
 Coat hardness 250-350 HV
 Special colours upon request.
 The surface area - subject to technical procedure
 - can show optical changes.

Profile tolerance
 (Excerpt from DIN EN 12020-2)

Nominal dimensions:
 The dimension deviation depends on the precision with which the tooling is manufactured, the tooling wear and the variation during the extrusion process. For one manufacturing setup the variation within one profile is 0.01 mm.

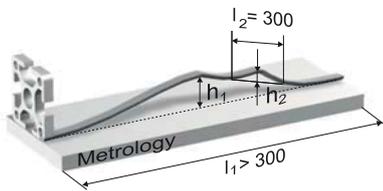

Profile tolerance		
Dim. range in mm		Tolerance in mm

150	180	± 1.00
180	240	± 1.20
240	300	± 1.50

Flatness of profile surfaces

In order to optimize the connection stability, all profile surfaces are designed and manufactured with concave surfaces. This assures that the assembled profiles contact on the outer edges only (line of contact).
 When tightening the connectors the slot flanks will be drawn to the mounting profile within the elastic range and will keep the connectors under tension.

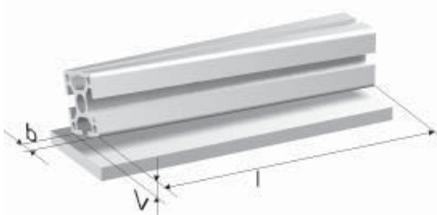

Straightness tolerance
 of the edge in longitudinal direction

At a certain length l₁ the given tolerance h₁ is not to be exceeded.
 For each incremental length of l₂ = 300 mm the deviation h₂ is not to exceed 0.3 mm.

Bending strength

For the computation of deflection use formulas on this page.

For the computation of deflection by the profiles own weight, apply "Type of load" 3, 6 or 9.

- f = Deflection in mm
- F = Type of load in N
- l = Profile length in mm
- J 1) = Moment of inertia in mm⁴
- E = Module of elasticity in N/mm²
- E_{AL} = 70,000 N/mm²

1) Comments

- Catalogue data in cm⁴
(Note factor of conversion 10⁴ !)
- The moments of inertia of a certain profile are listed on the respective profile page (p. 1.09, 1.10, 1.11) and in the tables 1.1D

Type of load		
1	<p>A cantilever beam fixed at the left end and free at the right end. A downward point load 'F' is applied at a distance 'l' from the fixed end. The deflection 'f' is shown at the free end.</p>	$f = \frac{F \cdot l^3}{3E \cdot J}$
2	<p>A cantilever beam fixed at the left end. Two downward point loads are applied: 'F₁' at distance 'l₁' and 'F₂' at distance 'l₂'. The deflection 'f' is shown at the free end.</p>	$f = \frac{F \cdot l^3 + F_1 \cdot l_1^2 \cdot l + F_2 \cdot l_2^2 \cdot l}{3E \cdot J}$
3	<p>A cantilever beam fixed at the left end and free at the right end. A uniformly distributed load 'F' is applied downwards along the entire length 'l'. The deflection 'f' is shown at the free end.</p>	$f = \frac{F \cdot l^3}{8E \cdot J}$

Approximate determination of deflection

To determine the approximation of deflection, use the diagram on this page.

Profile length l in mm

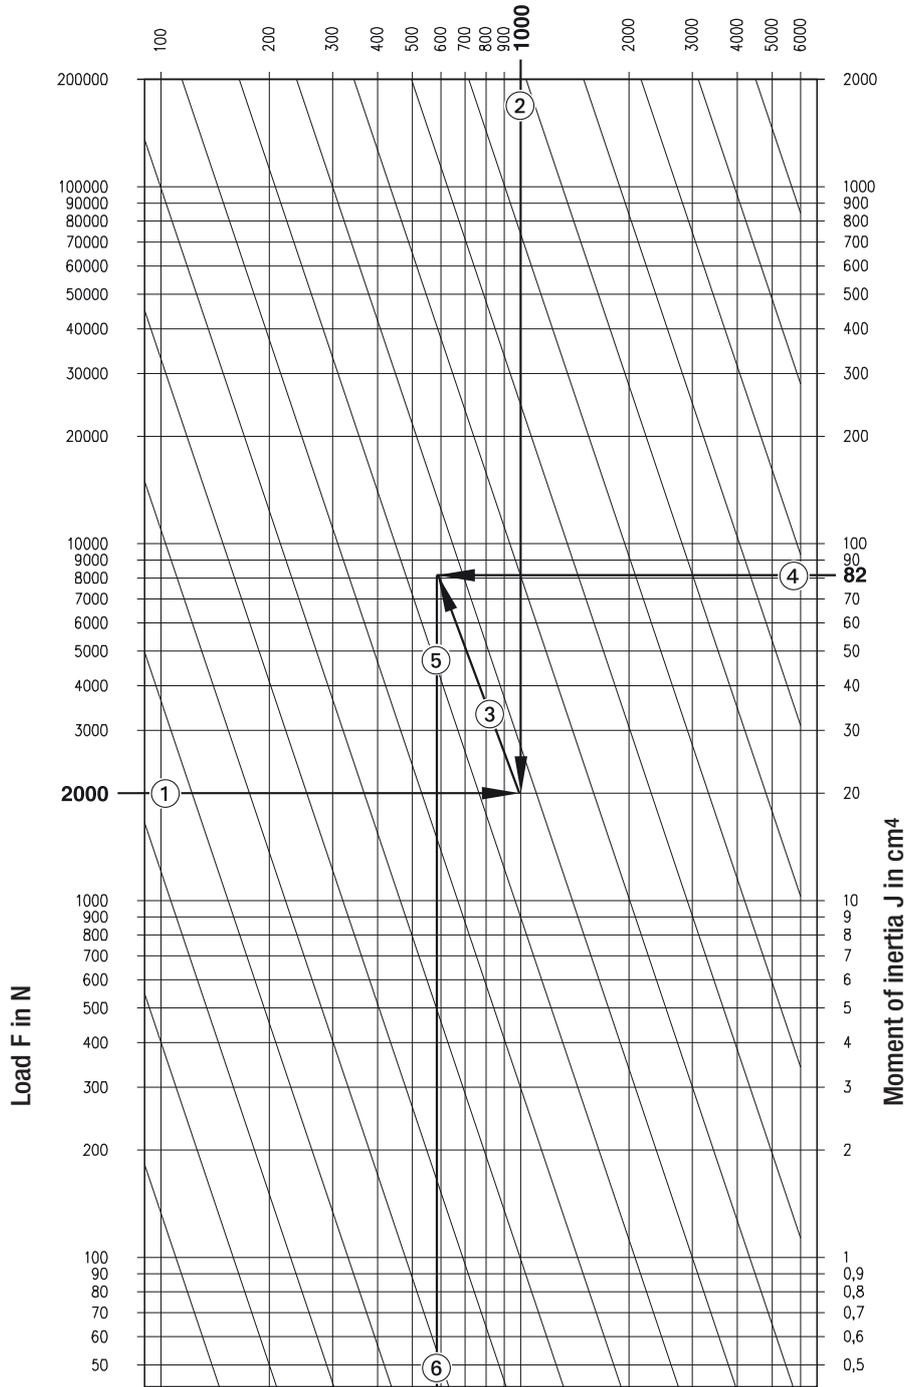

Determination of deflection

1. Type of load F in N
2. Profile length l in mm
3. Move cross point on the diagonal
4. Moment of inertia of the selected profile J in cm^4
5. Cross point with the diagonal to be vertically extended to the bottom
6. Deflection f for the specific "Type of load" in mm

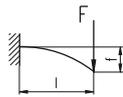

Example

- ① $F = 2,000 \text{ N}$
- ② $l = 1,000 \text{ mm}$
- ③ Move cross point on the diagonal
- ④ $J = 82.0 \text{ cm}^4$ for profile $40 \times 80, 6E$
- ⑤ Cross point with the diagonal to be vertically extended to the bottom
- ⑥ Deflection for the specific "Type of load" in mm:

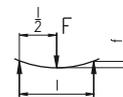

Type of load 1: $f = 9.5 \text{ mm}$
 Type of load 4: $f = 0.6 \text{ mm}$
 Type of load 8: $f = 0.15 \text{ mm}$

Profile combinations

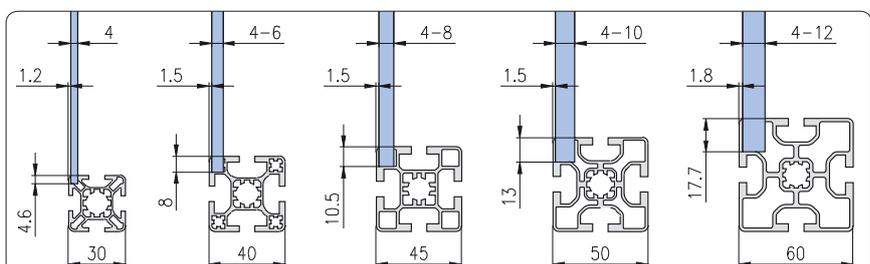

With the MayTec Connector System it is possible to make a multitude of form-matching and stable profile combinations.

Special slits

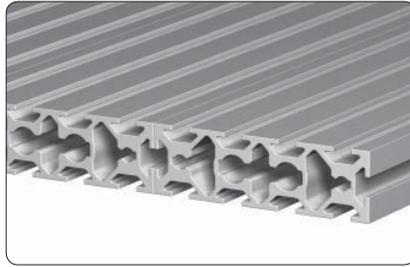

Panel elements can be set in the profile flush to the outer edge for form-matching design. The slits needed for that can be made in nearly all profiles.

The proven connection system!

The MayTec quick-connection system allows combination of all MayTec profiles in any way imaginable.

It carries same stability out after all four sides.

The connection allows:

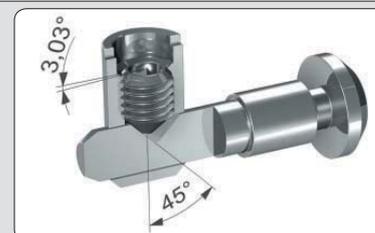

- easy machining
- quick assembly
- innumerable (dis)assemblies

The connection system is:

- complete
- stable
- functional

Vibration proof

The different direction angles of lead of thread and clamping cone prevent the loosening of the connection by vibration.

MayTec connector with square head

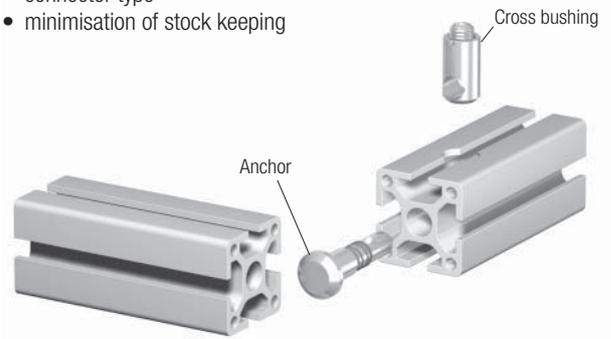

The MayTec connector with square head offers the highest load bearing capacity.

MayTec universal-connector

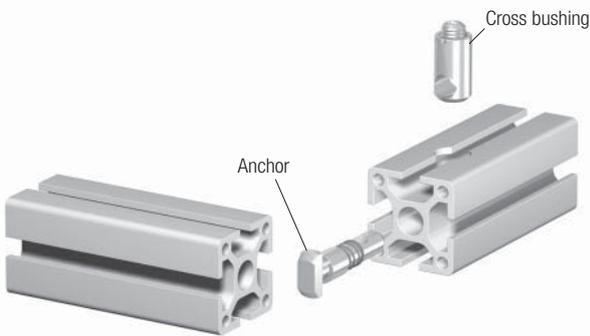

The MayTec universal-connector allows:

- any desired position of profiles
- only one type for 0° and 90° position of cross bushing
- simple determination of the connector type
- minimisation of stock keeping

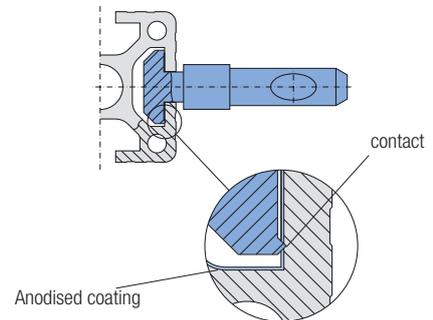

MayTec standard-connector

The MayTec standard-connector allows subsequent front-sided mounting or dismounting in any location.

MayTec ground-connector for potential equalisation

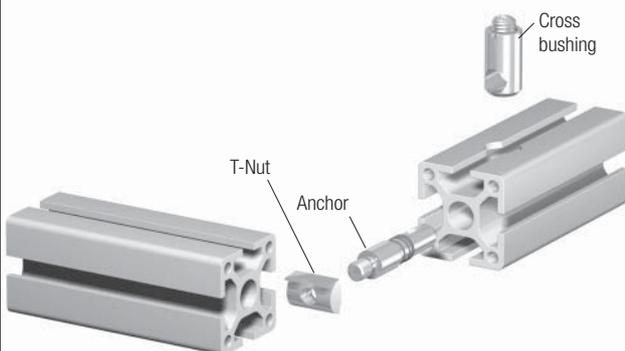

The MayTec ground-connector allows potential equalisation between two profiles. When the connector is tightened, the serration at the rear of the anchor head penetrates the anodised profile coating and thus provides an electrical contact.

ST-Connector

Application

Connector for mounting into E-slot and for connection of profiles 30×150
Alternative connection possibility
↔ *Universal connector, 106*

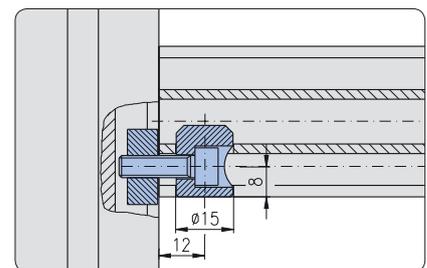

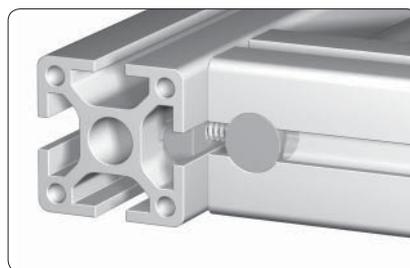

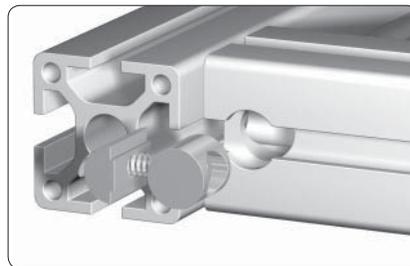

Application

ST-Connector for later insertion of profiles into closed frames

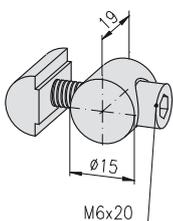

Assembly

- ① push the profile into the frame
- ② insert and rotate the T-Nut, pretension the screw (and cross bushing)
- ③ push the connector into the cross bushing bore, tighten the screw

Bayonet type connector

Application

Connection without profile machining.
Suitable for the connection of profiles with E-slots to profiles with E- or F-slots.

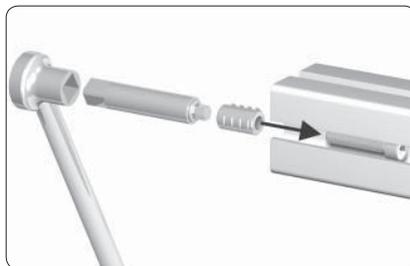

Application

Suitable for the subsequent mounting of profiles

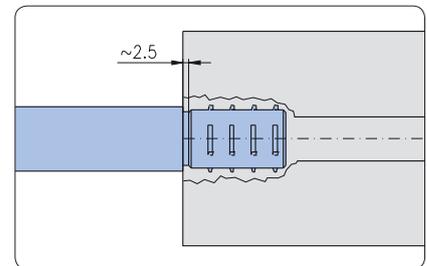

Mounting example

for bayonet type connector with T-slot nut

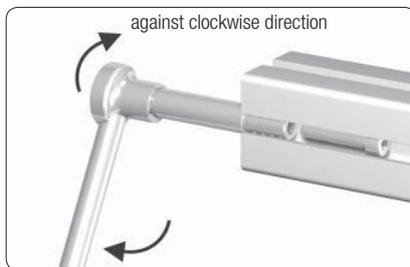

Pre-assembly of the notching case

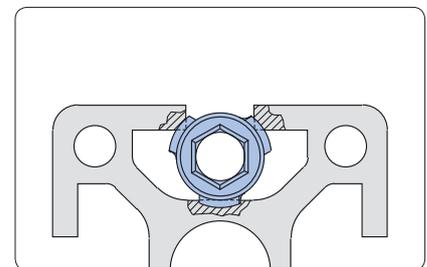

insert the cap head screw and the notching case into the slot

positioning with socket pin

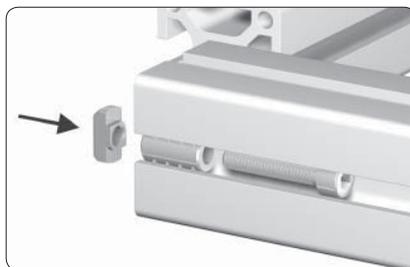

tighten the notching case (approx. 45° anti-clockwise turn)

end position of the notching case

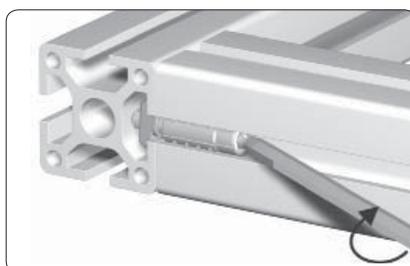

Final assembly

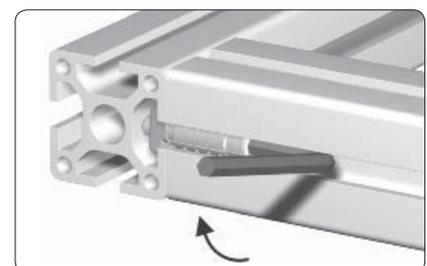

pre-mounting of the T-slot nut

pre-mounting of the T-slot nut

join the profiles and tighten the T-slot nut

final tightening with socket spanner

Subsequent mounting of profiles

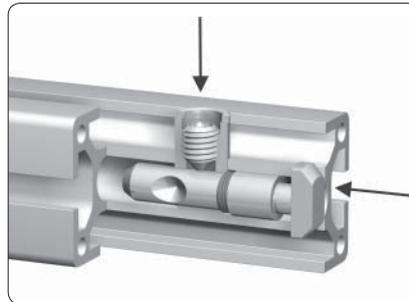

Step by step instruction for subsequent mounting of profiles with two standard connections for all profile groups

For the subsequent mounting of the profile:

1. Mill on both ends a slot size of 6×8 mm.

2. Mount connector and fix anchor in front position with setscrew.

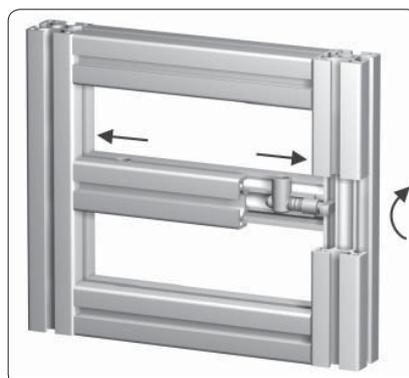

3. Mount profile.

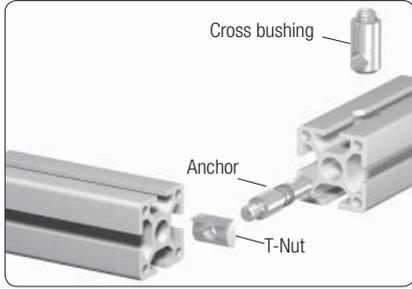

4. Loosen setscrew.

Due to the compressing spring the anchor is pushed into the slot. Turn anchor by 90° with screw driver. Fasten setscrew.

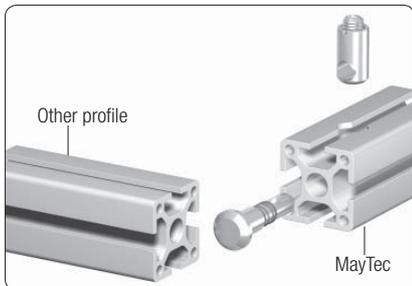

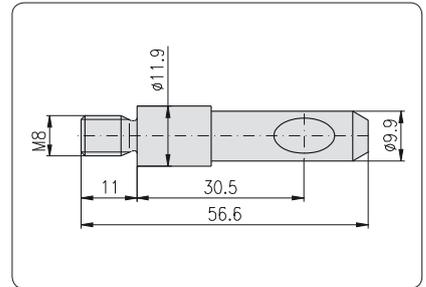

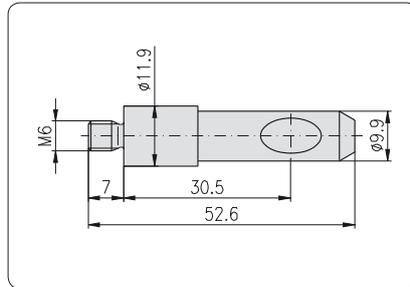

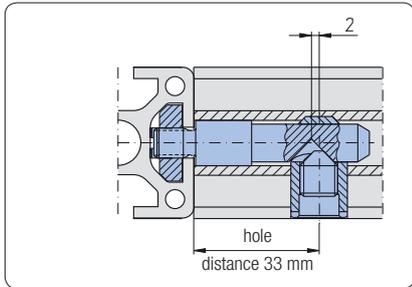

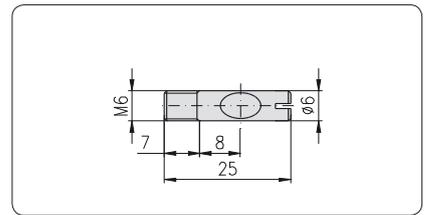

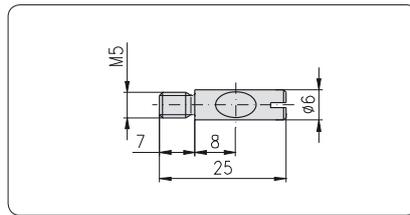

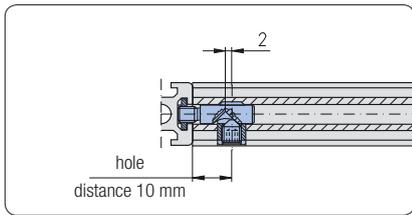

Connection of MayTec with other profile systems

MayTec profiles can easily be combined with other profile systems.

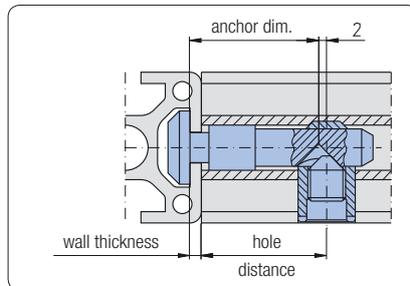

With the MayTec Screw-type connector and the T-Nut of the other profile system

With the MayTec Standard-connector two points have to be considered:

1. Anchor head-form and size

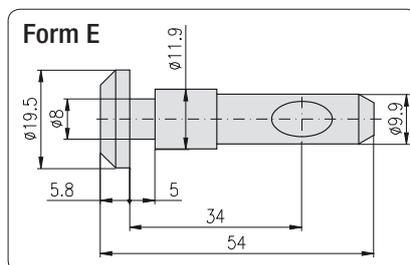

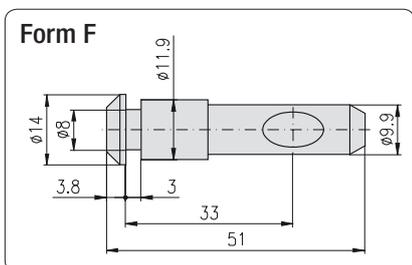

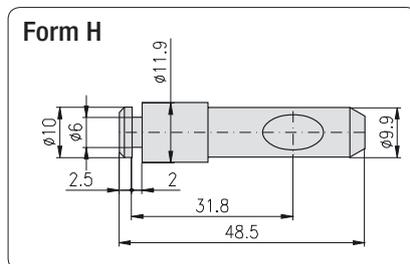

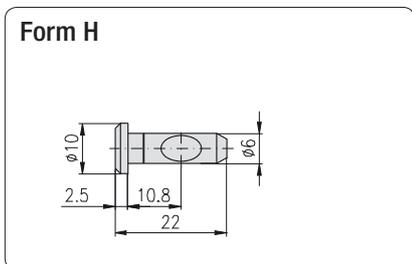

The MayTec system provides 3 anchor head sizes. If any of the sizes don't fit into the slots of other profile systems, the anchor head can be made to fit as required.

2. Hole distance

During the machining of the cross bore the hole distance has to match the wall thickness of the profile.

$$\text{hole distance} = \text{anchor dim.} - \text{wall thickness} + 2 \text{ mm}$$

Framing profiles

Application

The framing profile allows the installation of panels in closed frames

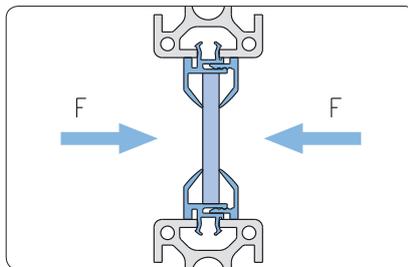

Assembly

1. Insert base profile in profile slot
2. Put panel element in position
3. Push clamping strip in position

Comments

The clamping strip is badged by a notch as a distinctive mark to the base profile

Maximum loading of framing profile:

$$F_{max} = 200 \text{ N/m}$$

For maximum loading of element be aware of the stability of used framing profile

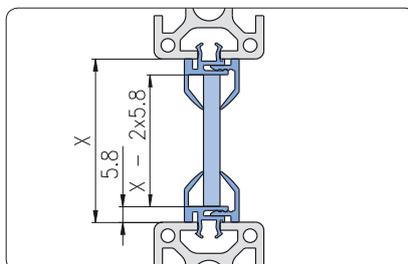

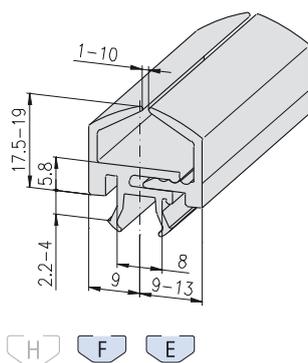

Technical data

bar length: 6 m

material: • base body: PVC rigid, 98° Shore A

Adjustable tilt-feet

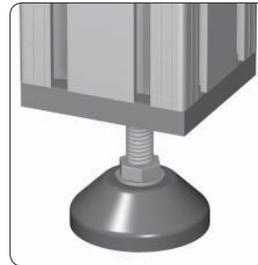

Application

Adjustable tilt-feet for gradual height adjustment of sub-assemblies such as:

- tables
- bases
- shelves
- stands

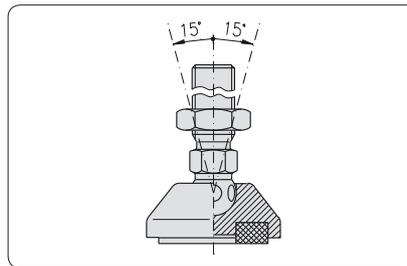

Fastening in core hole thread M14

Fastening with base plate, for profiles without centric core hole

Fastening by press-fit threaded insert across the profile

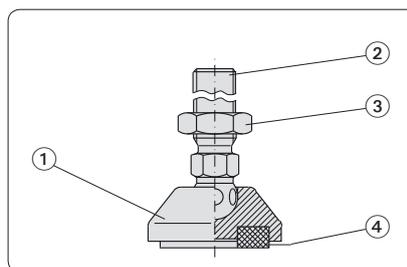

Levelling via ball and ball socket $\pm 15^\circ$

Comments

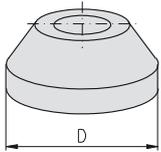

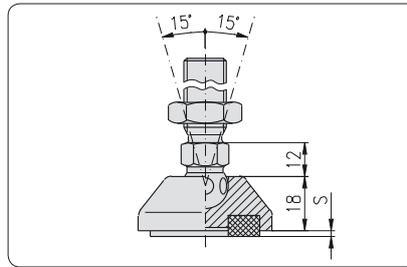

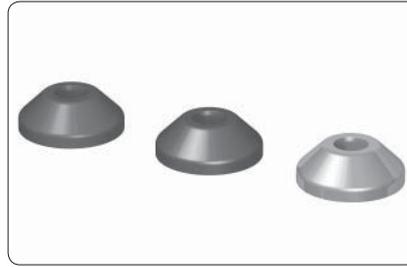

Infinitely variable adjustable tilt-feet for use either with:

- anti-slip disc
- cushion element

Potential equalisation

Application

Ground connections to establish the potential equalisation between two profiles
 The serration at the bottom of the socket head of the connector pushes through the anodised coating of the profiles and thus provides the electrical contact

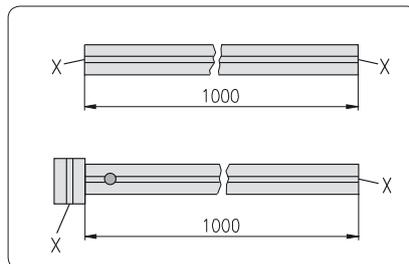

Comments

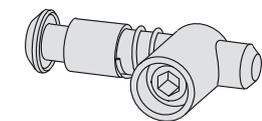

Suitable to equalise charge accumulations
 Not suitable for higher currents

Technical data

Low current measurements in accordance with DIN VDE 0413, Part 4 for the control of protective circuits, earthing circuits and potential equalisation methods through low resistance connections for protection against dangerous currents

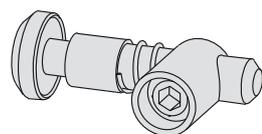

Resistance values with DC current of more than 200 mA with 1.0 m alu-profile

Self locking washers
DIN 25201

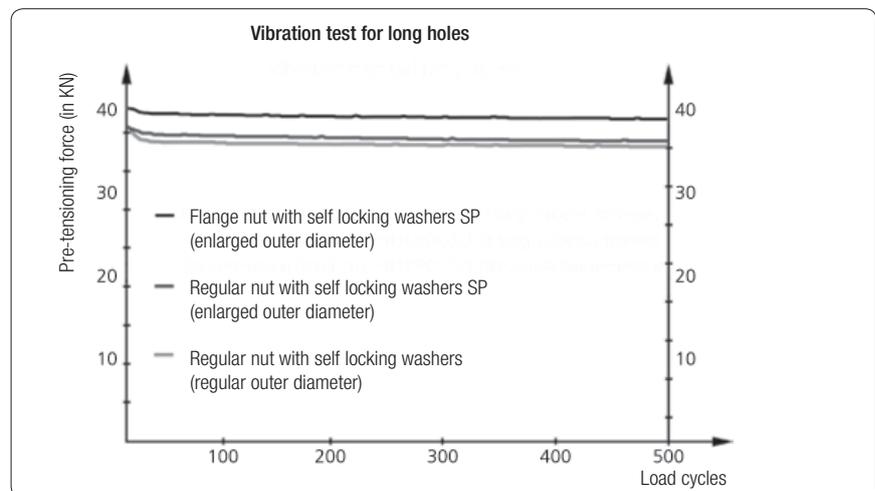

The cam angle α of the washers is larger than the thread pitch β of the bolt.

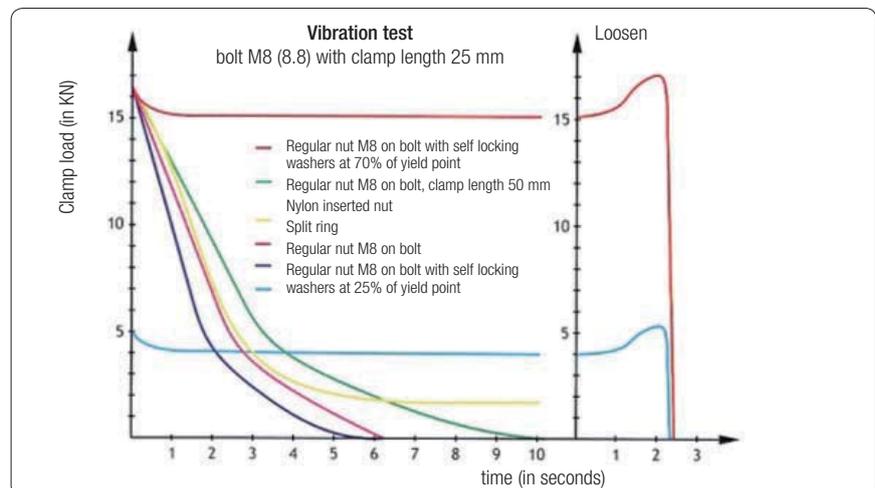

Advantages

- Maximum safety during the tightening of the screw
- Reliable connection under extreme vibration and dynamic loads
- Ease of assembly and disassembly
- Positive locking at low and high preload levels
- Same temperature characteristics as standard nut & bolt
- Surface protection
- Reusable

The outside dimensions of the locking washer guarantees it's effectiveness even when used in countersunk holes. Washers with enlarged outer diameter (SP) in combination with flanged nuts / bolts are recommended for use on large / long holes, painted surfaces or soft materials, e.g. aluminium.

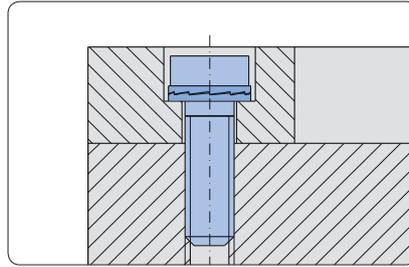

Junker vibration test for bolt M12 (8.8)

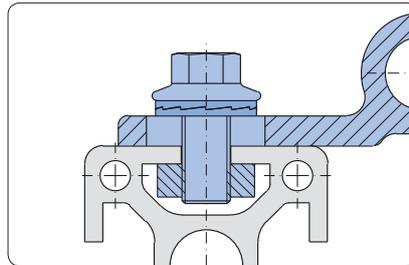

Test results

Self locking washers standard

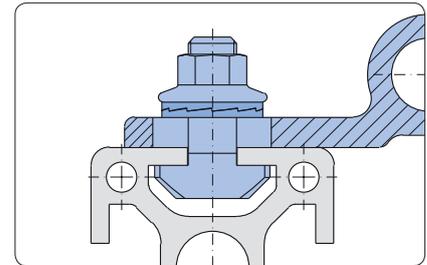

Cylindrical head screw DIN 6912 with self locking washers, standard

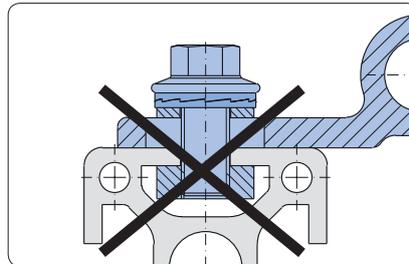

Self locking washers SP (enlarged outer diameter)

Hexagonal flange head screw DIN 6912 and self locking washers SP

T-screw with flange nut DIN 6923 and self locking washers SP

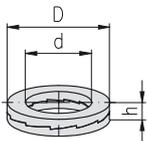

Do not use washers that are not secured in position
